DonorsChoose

DonorsChoose.org receives hundreds of thousands of project proposals each year for classroom projects in need of funding. Right now, a large number of volunteers is needed to manually screen each submission before it's approved to be posted on the DonorsChoose.org website.

Next year, DonorsChoose.org expects to receive close to 500,000 project proposals. As a result, there are three main problems they need to solve:

- How to scale current manual processes and resources to screen 500,000 projects so that they can be posted as quickly and as efficiently as possible
- How to increase the consistency of project vetting across different volunteers to improve the experience for teachers
- How to focus volunteer time on the applications that need the most assistance

The goal of the competition is to predict whether or not a DonorsChoose.org project proposal submitted by a teacher will be approved, using the text of project descriptions as well as additional metadata about the project, teacher, and school. DonorsChoose.org can then use this information to identify projects most likely to need further review before approval.

About the DonorsChoose Data Set

The `train.csv` data set provided by DonorsChoose contains the following features:

Feature	Description
`project_id`	A unique identifier for the proposed project. **Example:** `p036502`
`project_title`	Title of the project. **Examples:** • `Art Will Make You Happy!` • `First Grade Fun`
`project_grade_category`	Grade level of students for which the project is targeted. One of the following enumerated values: • `Grades PreK-2` • `Grades 3-5` • `Grades 6-8` • `Grades 9-12`
`project_subject_categories`	One or more (comma-separated) subject categories for the project from the following enumerated list of values: • `Applied Learning` • `Care & Hunger` • `Health & Sports` • `History & Civics` • `Literacy & Language` • `Math & Science` • `Music & The Arts` • `Special Needs` • `Warmth` **Examples:** • `Music & The Arts` • `Literacy & Language, Math & Science`
`school_state`	State where school is located (Two-letter U.S. postal code). **Example:** `WY`
`project_subject_subcategories`	One or more (comma-separated) subject subcategories for the project. **Examples:** • `Literacy` • `Literature & Writing, Social Sciences`
`project_resource_summary`	An explanation of the resources needed for the project. **Example:** • `My students need hands on literacy materials to manage sensory needs!`
`project_essay_1`	First application essay*
`project_essay_2`	Second application essay*
`project_essay_3`	Third application essay*

Feature	Description
`project_essay_4`	Fourth application essay
`project_submitted_datetime`	Datetime when project application was submitted. **Example:** `2016-04-28 12:43:56.245`
`teacher_id`	A unique identifier for the teacher of the proposed project. **Example:** `bdf8baa8fedef6bfeec7ae4ff1c15c56`
`teacher_prefix`	Teacher's title. One of the following enumerated values: • `nan` • `Dr.` • `Mr.` • `Mrs.` • `Ms.` • `Teacher.`
`teacher_number_of_previously_posted_projects`	Number of project applications previously submitted by the same teacher. **Example:** `2`

* See the section **Notes on the Essay Data** for more details about these features.

Additionally, the `resources.csv` data set provides more data about the resources required for each project. Each line in this file represents a resource required by a project:

Feature	Description
`id`	A `project_id` value from the `train.csv` file. **Example:** `p036502`
`description`	Desciption of the resource. **Example:** `Tenor Saxophone Reeds, Box of 25`
`quantity`	Quantity of the resource required. **Example:** `3`
`price`	Price of the resource required. **Example:** `9.95`

Note: Many projects require multiple resources. The `id` value corresponds to a `project_id` in train.csv, so you use it as a key to retrieve all resources needed for a project:

The data set contains the following label (the value you will attempt to predict):

Label	Description
`project_is_approved`	A binary flag indicating whether DonorsChoose approved the project. A value of `0` indicates the project was not approved, and a value of `1` indicates the project was approved.

Notes on the Essay Data

Prior to May 17, 2016, the prompts for the essays were as follows:

- __project_essay_1:__ "Introduce us to your classroom"
- __project_essay_2:__ "Tell us more about your students"
- __project_essay_3:__ "Describe how your students will use the materials you're requesting"
- __project_essay_4:__ "Close by sharing why your project will make a difference"

Starting on May 17, 2016, the number of essays was reduced from 4 to 2, and the prompts for the first 2 essays were changed to the following:

- __project_essay_1:__ "Describe your students: What makes your students special? Specific details about their background, your neighborhood, and your school are all helpful."
- __project_essay_2:__ "About your project: How will these materials make a difference in your students' learning and improve their school lives?"

For all projects with project_submitted_datetime of 2016-05-17 and later, the values of project_essay_3 and project_essay_4 will be NaN.

```

summary

Delaware (DE) state from the United States has the highest percent of projects accepted within the whole country having almost 90% acceptance rate, followed by North Dakota (ND) and Washington (WA) nearly 89% and 88% respectively each. Vermont (VT) has the lowest Approval rate with exactly 80% followed by District of Columbia (DC) and Texas (TX) with nearly 80% and 81% respectively.

46           VT                   64     80  0.800000
```

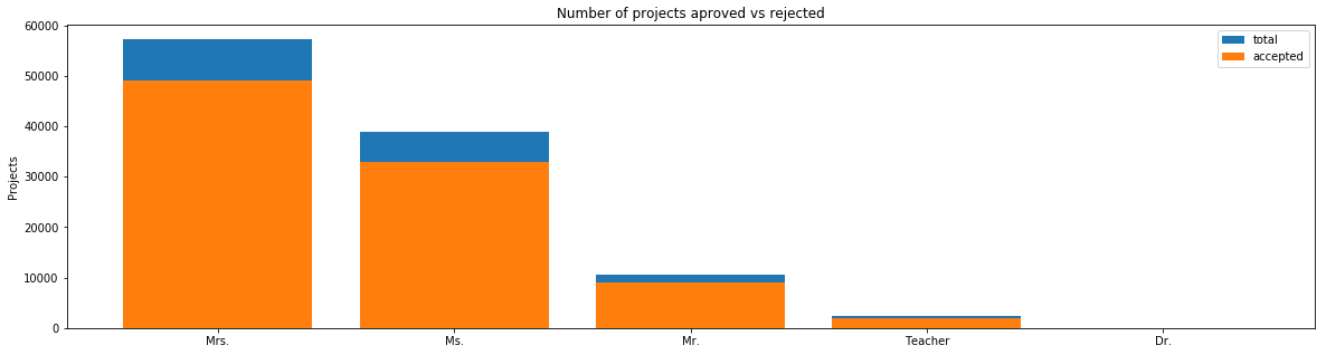
summary

1. Every state has greater than 80% success rate in approval.
2. There is a lot of variability in the number of projects that have been submitted across the States.
3. California(CA) has the highest number of project proposals when compared to the other states, Surprisingly, 85% of the projects gets approved on an average which is nearly 13205 out of 15388 project proposals.
4. Vermont(VT) has the lowest number of project proposals initiated (80) and almost 80% of the project proposal gets acceptance (64 out of 80). Well, in terms of rejection only 16 were rejected.

1.2.2 Univariate Analysis: teacher_prefix

In [11]:

```
univariate_barplots(project_data, 'teacher_prefix', 'project_is_approved' , top=False)
```



```
  teacher_prefix  project_is_approved  total       Avg
2           Mrs.                48997  57269  0.855559
3            Ms.                32860  38955  0.843537
1            Mr.                 8960  10648  0.841473
4        Teacher                 1877   2360  0.795339
0            Dr.                    9     13  0.692308
==================================================
  teacher_prefix  project_is_approved  total       Avg
2           Mrs.                48997  57269  0.855559
3            Ms.                32860  38955  0.843537
1            Mr.                 8960  10648  0.841473

0            Dr.                    9     13  0.692308
```

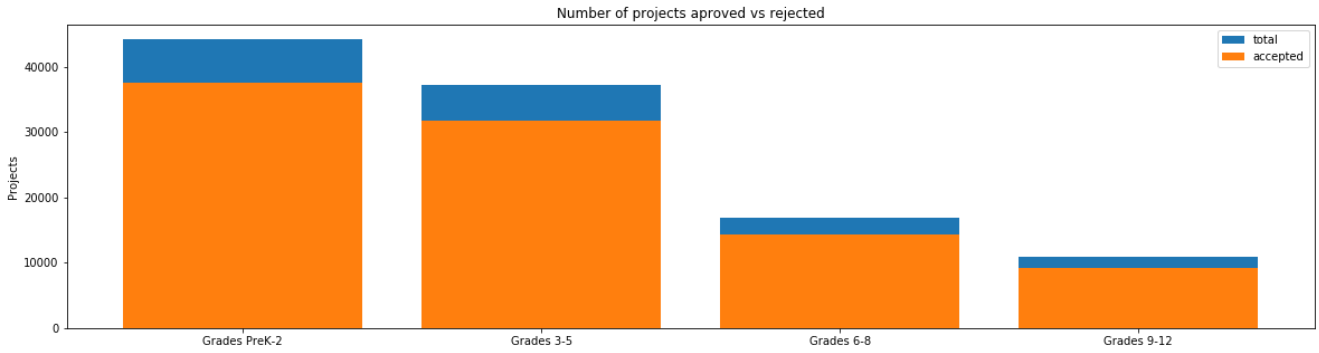
summary

1. Female Teachers have the maximum number of projects proposed and accepted compared to the male teachers.
2. Teachers with prefixes Mrs. , which means Married Women as teachers have a higher number of projects Proposed as well as accepted when compared to the younger Unmarried Women Teachers.
3. Teachers with Dr. title have proposed hardly 13 projects and out of which 9 of them have been approved.

1.2.3 Univariate Analysis: project_grade_category

In [12]:

```
univariate_barplots(project_data, 'project_grade_category', 'project_is_approved', top=False)
```



```
  project_grade_category  project_is_approved  total       Avg
3          Grades PreK-2                37536  44225  0.848751
0             Grades 3-5                31729  37137  0.854377
1             Grades 6-8                14258  16923  0.842522
2            Grades 9-12                 9183  10963  0.837636
==================================================
  project_grade_category  project_is_approved  total       Avg
3          Grades PreK-2                37536  44225  0.848751
0             Grades 3-5                31729  37137  0.854377
1             Grades 6-8                14258  16923  0.842522
2            Grades 9-12                 9183  10963  0.837636
```

summary

1. There are alot of projects proposed for the students between Pre Kindergarden and 2nd Grade while for the rest it keeps decreasing.
2. The average Acceptance rate of the project is 84% irrespective of the Grade.
3. We also notice that Students between the 9th Grade and 12th Grade have the lowest number of projects proposed as well as accepted.

1.2.4 Univariate Analysis: project_subject_categories

In [13]:

```
catogories = list(project_data['project_subject_categories'].values)
# remove special characters from list of strings python:
https://stackoverflow.com/a/47301924/4084039

# https://www.geeksforgeeks.org/removing-stop-words-nltk-python/
# https://stackoverflow.com/questions/23669024/how-to-strip-a-specific-word-from-a-string
# https://stackoverflow.com/questions/8270092/remove-all-whitespace-in-a-string-in-python
cat_list = []
for i in catogories:
    temp = ""
    # consider we have text like this "Math & Science, Warmth, Care & Hunger"
    for j in i.split(','): # it will split it in three parts ["Math & Science", "Warmth", "Care & H
unger"]
        if 'The' in j.split(): # this will split each of the catogory based on space "Math & Scienc
e"=> "Math","&", "Science"
            j=j.replace('The','') # if we have the words "The" we are going to replace it with ''(i
.e removing 'The')
        j = j.replace(' ','') # we are placeing all the ' '(space) with ''(empty) ex:"Math &
Science"=>"Math&Science"
        temp+=j.strip()+" " #" abc ".strip() will return "abc", remove the trailing spaces
        temp = temp.replace('&','_') # we are replacing the & value into
    cat_list.append(temp.strip())
```

In [14]:

```
project_data['clean_categories'] = cat_list
project_data.drop(['project_subject_categories'], axis=1, inplace=True)

summary

1. Projects belonging to the Literacy and Language categories have the highest number of projects proposed under. The maximum number of accepted projects also belong to this category, having an acceptance rate of nearly 87%.
2. Projects belonging to both Maths and Science have acceptance rate of nearly 82% while introducing the concept of Literacy and Language to this can increase its accpetance rate to nearly 87%
3. There is a lot of variablity in the total number of projects proposed per Category of the project.
4. Projects belonging to both Maths and Science when combined with Applied Learning has the least number of projects proposed as well approved.
5. There is also Variability in Acceptance rate, projects under the category Warmth, Care and Hunger have an acceptance rate of 93.5%

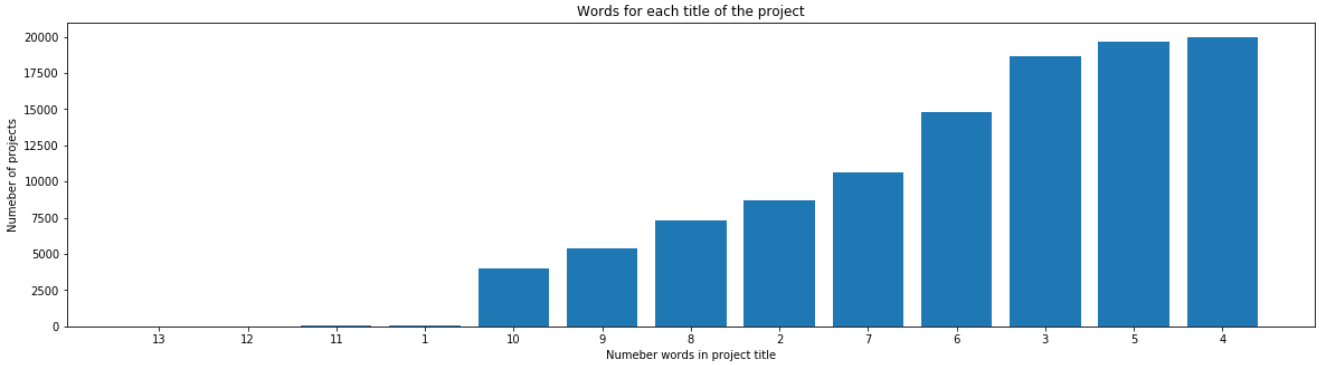
1.2.6 Univariate Analysis: Text features (Title)

In [25]:

```
#How to calculate number of words in a string in DataFrame:
https://stackoverflow.com/a/37483537/4084039
word_count = project_data['project_title'].str.split().apply(len).value_counts()
word_dict = dict(word_count)
word_dict = dict(sorted(word_dict.items(), key=lambda kv: kv[1]))

ind = np.arange(len(word_dict))
plt.figure(figsize=(20,5))
p1 = plt.bar(ind, list(word_dict.values()))

plt.ylabel('Numeber of projects')
plt.xlabel('Numeber words in project title')
plt.title('Words for each title of the project')
plt.xticks(ind, list(word_dict.keys()))
plt.show()
```



summary

1. Most of the projects have 4 words in the title. 2.There are hardly any project titles containing more than 10 words. 3.Roughly most of the projects have 3, 4 or 5 words in the title.

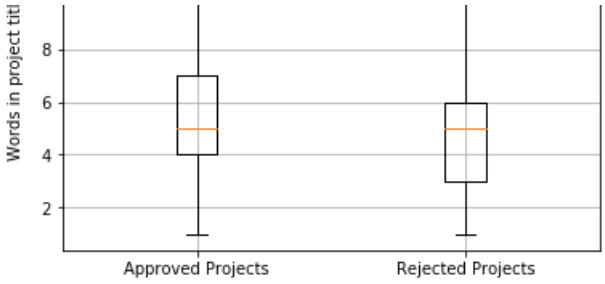
In [26]:

```
approved_title_word_count = project_data[project_data['project_is_approved']==1]['project_title'].
str.split().apply(len)
approved_title_word_count = approved_title_word_count.values

rejected_title_word_count = project_data[project_data['project_is_approved']==0]['project_title'].
str.split().apply(len)
rejected_title_word_count = rejected_title_word_count.values
```

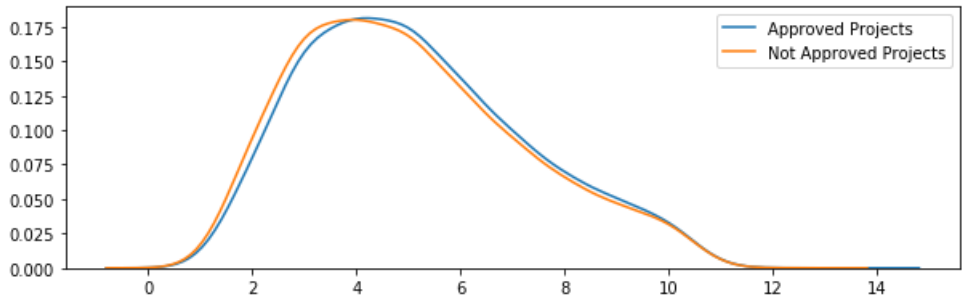
In [27]:

```
# https://glowingpython.blogspot.com/2012/09/boxplot-with-matplotlib.html
plt.boxplot([approved_title_word_count, rejected_title_word_count])
plt.xticks([1,2],('Approved Projects','Rejected Projects'))
plt.ylabel('Words in project title')
plt.grid()
plt.show()
```



In [28]:

```
plt.figure(figsize=(10,3))
sns.kdeplot(approved_title_word_count,label="Approved Projects", bw=0.6)
sns.kdeplot(rejected_title_word_count,label="Not Approved Projects", bw=0.6)
plt.legend()
plt.show()
```



summary

The number of Projects approved have a slightly more number of words in the Title when compared to the Rejected Projects. The Boxplots use the Percentiles while the above graph used Probability densities.

1.2.7 Univariate Analysis: Text features (Project Essay's)

In [29]:

```
# merge two column text dataframe:
project_data["essay"] = project_data["project_essay_1"].map(str) +\
                        project_data["project_essay_2"].map(str) + \
                        project_data["project_essay_3"].map(str) + \
                        project_data["project_essay_4"].map(str)
```

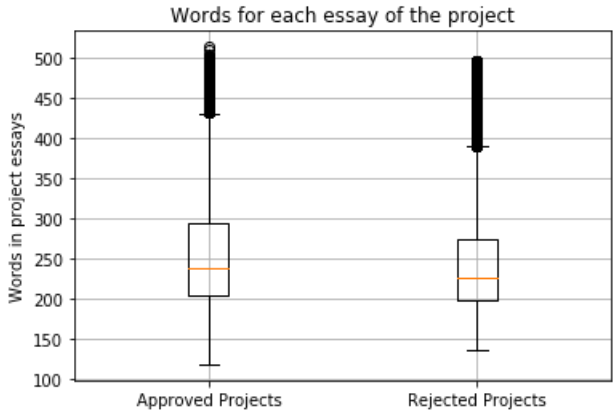
In [30]:

```
approved_word_count = project_data[project_data['project_is_approved']==1]['essay'].str.split().app
ly(len)
approved_word_count = approved_word_count.values

rejected_word_count = project_data[project_data['project_is_approved']==0]['essay'].str.split().app
ly(len)
rejected_word_count = rejected_word_count.values
```

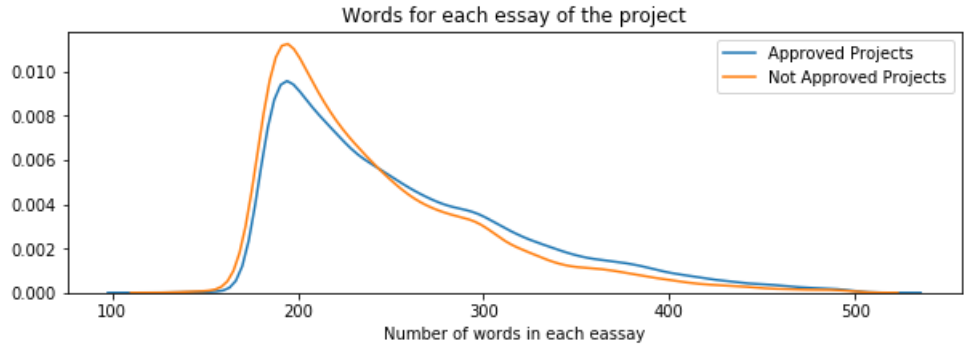
In [31]:

```
# https://glowingpython.blogspot.com/2012/09/boxplot-with-matplotlib.html
plt.boxplot([approved_word_count, rejected_word_count])
plt.title('Words for each essay of the project')
plt.xticks([1,2],('Approved Projects','Rejected Projects'))
plt.ylabel('Words in project essays')
plt.grid()
plt.show()
```



In [32]:

```
plt.figure(figsize=(10,3))
sns.distplot(approved_word_count, hist=False, label="Approved Projects")
sns.distplot(rejected_word_count, hist=False, label="Not Approved Projects")
plt.title('Words for each essay of the project')
plt.xlabel('Number of words in each eassay')
plt.legend()
plt.show()
```



summary

The number of words in the Project Essays of Approved Projects are slightly more than the number of words in the Project Essays of the Rejected Projects. This can be noticed by looking at the Blue Line (PDF Curve of Approved Projects) which is denser for words more than 240 to almost 480 or 500.

1.2.8 Univariate Analysis: Cost per project

In [33]:

```
# we get the cost of the project using resource.csv file
resource_data.head(2)
```

Out[33]:

	id	description	quantity	price
0	p233245	LC652 - Lakeshore Double-Space Mobile Drying Rack	1	149.00
1	p069063	Bouncy Bands for Desks (Blue support pipes)	3	14.95

In [34]:

```
# https://stackoverflow.com/questions/22407798/how-to-reset-a-dataframes-indexes-for-all-groups-in-one-step
price_data = resource_data.groupby('id').agg({'price':'sum', 'quantity':'sum'}).reset_index()
price_data.head(2)
```

Out[34]:

	id	price	quantity
0	p000001	459.56	7
1	p000002	515.89	21

In [35]:

```
# join two dataframes in python:
project_data = pd.merge(project_data, price_data, on='id', how='left')
```

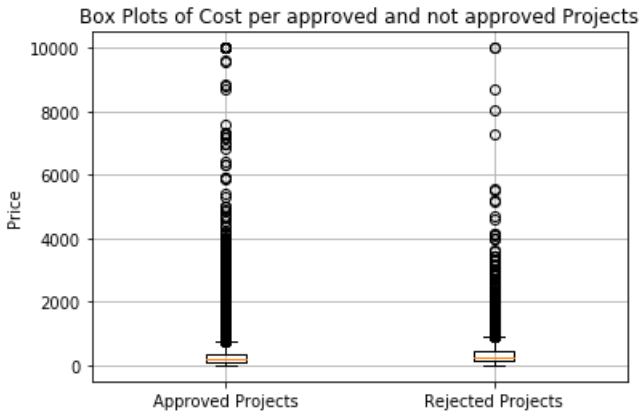
In [36]:

```
approved_price = project_data[project_data['project_is_approved']==1]['price'].values

rejected_price = project_data[project_data['project_is_approved']==0]['price'].values
```

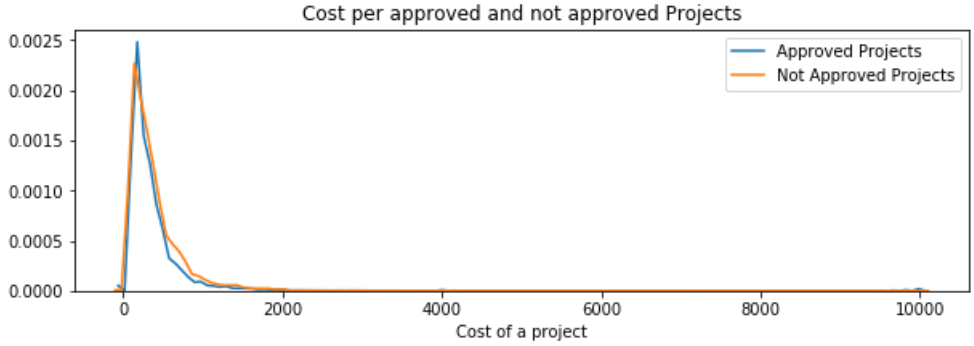
In [37]:

```
# https://glowingpython.blogspot.com/2012/09/boxplot-with-matplotlib.html
plt.boxplot([approved_price, rejected_price])
plt.title('Box Plots of Cost per approved and not approved Projects')
plt.xticks([1,2],('Approved Projects','Rejected Projects'))
plt.ylabel('Price')
plt.grid()
plt.show()
```



In [38]:

```
plt.figure(figsize=(10,3))
sns.distplot(approved_price, hist=False, label="Approved Projects")
sns.distplot(rejected_price, hist=False, label="Not Approved Projects")
plt.title('Cost per approved and not approved Projects')
plt.xlabel('Cost of a project')
plt.legend()
plt.show()
```



summary

Not much can be understood from the box plot depicting the Cost involved per project. We can generalise from the PDF curves that mostly Projects that are very costly are usually not approved

In [39]:

```
# http://zetcode.com/python/prettytable/
from prettytable import PrettyTable

#If you get a ModuleNotFoundError error , install prettytable using: pip3 install prettytable

x = PrettyTable()
x.field_names = ["Percentile", "Approved Projects", "Not Approved Projects"]

for i in range(0,101,5):
    x.add_row([i,np.round(np.percentile(approved_price,i), 3), np.round(np.percentile(rejected_pric
e,i), 3)])
print(x)
```

```
+------------+-------------------+-----------------------+
| Percentile | Approved Projects | Not Approved Projects |

|    100     |       9999.0      |         9999.0        |
+------------+-------------------+-----------------------+
```

summary

1.The Maximum price for any project should be less than 10,000 dollars

2.The Maximum price for any project should be less than 10,000 dollars.

3.The approved projects tend to have lower cost when compared to the projects that have not been approved. This can be noticed by looking at the percentile values. The 50th percentile Cost value for an approved project is 199 dollars while for the cost for the not approved projects is 263 dollars

1.2.9Univariate Analysis: teacher_number_of_previously_posted_projects

summary

1.We observe that it is not mandatory for a teacher to have proposed any project prior. Maximum number of teachers, nearly 82% of the approved projects have been submitted by teachers with no prior project proposals. New talent and efforts are well appreciated.

2.Very few teachers who have proposed more than 20 projects have got approval. But the rate of approval is Higher given the teacher has proposed atleast 19 different projects. 3.There is alot of variability in the number of projects previously proposed by the teacher varying from 0 to more than 20.

summary

1.The project summaries containing numeric values have a very high acceptance rate of 90%. Well, proper numbered requirements suggest clarity in the proposals and hence Alot of people tend to donate for a better cause, that is to help children

2.It is obvious from the graph that majority of the projects do not have numeric values stating the requirement of certain products

My students are English learners that are working on English as their second or third languages. W
e are a melting pot of refugees, immigrants, and native-born Americans bringing the gift of langua
ge to our school. \r\n\r\n We have over 24 languages represented in our English Learner program wi
th students at every level of mastery.  We also have over 40 countries represented with the
families within our school.  Each student brings a wealth of knowledge and experiences to us that
open our eyes to new cultures, beliefs, and respect.\"The limits of your language are the limits o
f your world.\"-Ludwig Wittgenstein  Our English learner's have a strong support system at home th
at begs for more resources.  Many times our parents are learning to read and speak English along s
ide of their children.  Sometimes this creates barriers for parents to be able to help their child
learn phonetics, letter recognition, and other reading skills.\r\n\r\nBy providing these dvd's and
players, students are able to continue their mastery of the English language even if no one at hom
e is able to assist.  All families with students within the Level 1 proficiency status, will be a
offered to be a part of this program.  These educational videos will be specially chosen by the En
glish Learner Teacher and will be sent home regularly to watch.  The videos are to help the child
develop early reading skills.\r\n\r\nParents that do not have access to a dvd player will have the
opportunity to check out a dvd player to use for the year.  The plan is to use these videos and ed
ucational dvd's for the years to come for other EL students.\r\nnannan
==================================================
The 51 fifth grade students that will cycle through my classroom this year all love learning, at l
east most of the time. At our school, 97.3% of the students receive free or reduced price lunch. O
f the 560 students, 97.3% are minority students. \r\nThe school has a vibrant community that loves
to get together and celebrate. Around Halloween there is a whole school parade to show off the bea
utiful costumes that students wear. On Cinco de Mayo we put on a big festival with crafts made by
the students, dances, and games. At the end of the year the school hosts a carnival to celebrate t
he hard work put in during the school year, with a dunk tank being the most popular activity.My st
udents will use these five brightly colored Hokki stools in place of regular, stationary, 4-legged
chairs. As I will only have a total of ten in the classroom and not enough for each student to hav
e an individual one, they will be used in a variety of ways. During independent reading time they
will be used as special chairs students will each use on occasion. I will utilize them in place of
chairs at my small group tables during math and reading times. The rest of the day they will be us
ed by the students who need the highest amount of movement in their life in order to stay focused
on school.\r\n\r\nWhenever asked what the classroom is missing, my students always say more Hokki
Stools. They can't get their fill of the 5 stools we already have. When the students are sitting i
n group with me on the Hokki Stools, they are always moving, but at the same time doing their
work. Anytime the students get to pick where they can sit, the Hokki Stools are the first to be ta
ken. There are always students who head over to the kidney table to get one of the stools who are
disappointed as there are not enough of them. \r\n\r\nWe ask a lot of students to sit for 7 hours
a day. The Hokki stools will be a compromise that allow my students to do desk work and move at th
e same time. These stools will help students to meet their 60 minutes a day of movement by
allowing them to activate their core muscles for balance while they sit. For many of my students,
these chairs will take away the barrier that exists in schools for a child who can't sit
still.nannan
==================================================
How do you remember your days of school? Was it in a sterile environment with plain walls, rows of
desks, and a teacher in front of the room? A typical day in our room is nothing like that. I work
hard to create a warm inviting themed room for my students look forward to coming to each day.\r\n
\r\nMy class is made up of 28 wonderfully unique boys and girls of mixed races in
Arkansas.\r\nThey attend a Title I school, which means there is a high enough percentage of free a
nd reduced-price lunch to qualify. Our school is an \"open classroom\" concept, which is very uniq
```

ue as there are no walls separating the classrooms. These 9 and 10 year-old students are very eage
r learners; they are like sponges, absorbing all the information and experiences and keep on wanti
ng more.With these resources such as the comfy red throw pillows and the whimsical nautical hangin
g decor and the blue fish nets, I will be able to help create the mood in our classroom setting to
be one of a themed nautical environment. Creating a classroom environment is very important in the
success in each and every child's education. The nautical photo props will be used with each child
as they step foot into our classroom for the first time on Meet the Teacher evening. I'll take pic
tures of each child with them, have them developed, and then hung in our classroom ready for their
first day of 4th grade. This kind gesture will set the tone before even the first day of school!
The nautical thank you cards will be used throughout the year by the students as they create thank
you cards to their team groups.\r\n\r\nYour generous donations will help me to help make our
classroom a fun, inviting, learning environment from day one.\r\n\r\nIt costs lost of money out of
my own pocket on resources to get our classroom ready. Please consider helping with this project t
o make our new school year a very successful one. Thank you!nannan
==
My kindergarten students have varied disabilities ranging from speech and language delays, cogniti
ve delays, gross/fine motor delays, to autism. They are eager beavers and always strive to work th
eir hardest working past their limitations. \r\n\r\nThe materials we have are the ones I seek out
for my students. I teach in a Title I school where most of the students receive free or reduced pr
ice lunch. Despite their disabilities and limitations, my students love coming to school and come
eager to learn and explore.Have you ever felt like you had ants in your pants and you needed to gr
oove and move as you were in a meeting? This is how my kids feel all the time. The want to be able
to move as they learn or so they say.Wobble chairs are the answer and I love then because they dev
elop their core, which enhances gross motor and in Turn fine motor skills. \r\nThey also want to l
earn through games, my kids don't want to sit and do worksheets. They want to learn to count by ju
mping and playing. Physical engagement is the key to our success. The number toss and color and sh
ape mats can make that happen. My students will forget they are doing work and just have the fun a
6 year old deserves.nannan
==
The mediocre teacher tells. The good teacher explains. The superior teacher demonstrates. The grea
t teacher inspires. -William A. Ward\r\n\r\nMy school has 803 students which is makeup is 97.6% Af
rican-American, making up the largest segment of the student body. A typical school in Dallas is m
ade up of 23.2% African-American students. Most of the students are on free or reduced lunch. We a
ren't receiving doctors, lawyers, or engineers children from rich backgrounds or neighborhoods. As
an educator I am inspiring minds of young children and we focus not only on academics but one smar
t, effective, efficient, and disciplined students with good character.In our classroom we can util
ize the Bluetooth for swift transitions during class. I use a speaker which doesn't amplify the so
und enough to receive the message. Due to the volume of my speaker my students can't hear videos o
r books clearly and it isn't making the lessons as meaningful. But with the bluetooth speaker my s
tudents will be able to hear and I can stop, pause and replay it at any time.\r\nThe cart will all
ow me to have more room for storage of things that are needed for the day and has an extra part to
it I can use. The table top chart has all of the letter, words and pictures for students to learn
about different letters and it is more accessible.nannan

       [ 0.00239637],
       [ 0.59519138],
       ...,
       [-0.15825829],
       [-0.61243967],
       [-0.51216657]])
```

summary

We observe that on an average Each project costs nearly 298 Dollars. With a Standard Deviation of 368 dollars. So , mostly majority of the projects are less than 1000 Dollars

Vectorizing - Quantity (Numerical Data)

In [98]:

```
import warnings
warnings.filterwarnings("ignore")

quantity_scalar = StandardScaler()

## Finding the mean and standard deviation of this data
quantity_scalar.fit(project_data['quantity'].values.reshape(-1,1))

print("Mean : {}".format(quantity_scalar.mean_[0]))

print("Standard deviation : {}".format(np.sqrt(quantity_scalar.var_[0])))

# Now standardize the data with above maen and variance.
quantity_standardized = quantity_scalar.transform(project_data['quantity'].values.reshape(-1, 1))
```

```
Mean : 16.965610354422964
```

```
Standard deviation : 26.182821919093175
```

In [99]:

```
quantity_standardized
```

Out[99]:

```
array([[ 0.23047132],
       [-0.60977424],
       [ 0.19227834],
       ...,
       [-0.4951953 ],
       [-0.03687954],
       [-0.45700232]])
```

summary

The projects on an average require atleast 17 Different of similar items. We observe that the Price paid is generally for the purchase of these Items. Donors can choose on projects to donate based on the Items provided to aid the Students of any Grade

Vectorizing - Number of Projects Proposed Previously by the Teacher (Numerical Data)

In [100]:

```
prev_projects_scalar = StandardScaler()

## Finding the mean and standard deviation of this data
prev_projects_scalar.fit(project_data['teacher_number_of_previously_posted_projects'].values.reshap
e(-1,1))

print("Mean : {}".format(prev_projects_scalar.mean_[0]))

print("Standard deviation : {}".format(np.sqrt(prev_projects_scalar.var_[0])))

# Now standardize the data with above maen and variance.
prev_projects_standardized =
prev_projects_scalar.transform(project_data['teacher_number_of_previously_posted_projects'].values
.reshape(-1, 1))
```

```
Mean : 11.153165275336848
Standard deviation : 27.77702641477403
```

In [101]:

```
prev_projects_standardized
```

Out[101]:

```
array([[-0.40152481],
       [-0.14951799],
       [-0.36552384],
       ...,
       [-0.29352189],
       [-0.40152481],
       [-0.40152481]])
```

summary

1.We observe that teachers generally on an average propose atleast 11 different projects .Well,the teachers are indeed actively seeking help to aid for the betterment of the students in their locality

1.4.4 Merging all the above features

In [115]:

```
print(categories_one_hot.shape)
print(sub_categories_one_hot.shape)
print(text_bow.shape)
print(price_standardized.shape)
```

```
(109248, 9)
(109248, 30)
(109248, 16623)
(109248, 1)
```

In [116]:

```
# merge two sparse matrices: https://stackoverflow.com/a/19710648/4084039
from scipy.sparse import hstack
# with the same hstack function we are concatinating a sparse matrix and a dense matirx :)
X = hstack((categories_one_hot, sub_categories_one_hot, text_bow, price_standardized))
X.shape
```

Out[116]:

```
(109248, 16663)
```

Assignment 2: Apply TSNE

If you are using any code snippet from the internet, you have to provide the reference/citations, as we did in the above cells. Otherwise, it will be treated as plagiarism without citations.

1.In the above cells we have plotted and analyzed many features. Please observe the plots and write the observations in markdown cells below every plot. 2.EDA: Please complete the analysis of the feature: teacher_number_of_previously_posted_projects

1. Build the data matrix using these features
   - school_state : categorical data (one hot encoding)
   - clean_categories : categorical data (one hot encoding)
   - clean_subcategories : categorical data (one hot encoding)
   - teacher_prefix : categorical data (one hot encoding)
   - project_grade_category : categorical data (one hot encoding)
   - project_title : text data (BOW, TFIDF, AVG W2V, TFIDF W2V)
   - price : numerical
   - teacher_number_of_previously_posted_projects : numerical

4.Now, plot FOUR t-SNE plots with each of these feature sets. A.categorical, numerical features + project_title(BOW) B.categorical, numerical features + project_title(TFIDF) C.categorical, numerical features + project_title(AVG W2V) D.categorical, numerical features + project_title(TFIDF W2V)

5.Concatenate all the features and Apply TNSE on the final data matrix

6.Note 1: The TSNE accepts only dense matrices

7.Note 2: Consider only 5k to 6k data points to avoid memory issues. If you run into memory error issues, reduce the number of data points but clearly state the number of datat-poins you are using

2.1 TSNE with `BOW` encoding of `project_title` feature (5000 Data Entries)

In [117]:

```
print("The Shape of Data matrices for Categorical Data are :")
print("\n")
print("The Shape of Data Matrix for different Categories of projects is :

print("The Shape of Data Matrix for different Sub-categories of projects is :
```

```
{}".format(sub_categories_one_hot.shape))
print("The Shape of Data Matrix with respect to Projects from a particular State in the United Sta
tes is : {}".format(school_state_categories_one_hot.shape))
print("The Shape of the Data Matrix of the different projects with respect to the Grades of the st
udents is : {} ".format(project_grade_categories_one_hot.shape))
print("The Shape of the Data Matrix with respect to title of the Teacher proposing the Teacher is
: {}".format(teacher_prefix_categories_one_hot.shape))
print("\n")
print("="*100)
print("\n")
print("The Shape of Data matrices for Numerical Data are :")
print("\n")
print("The Shape of the Data Matrix for price of the projects is : {}".format(price_standardized.s
hape))
print("The Shape of the Data Matrix for Quantity of the items for the projects is : {}".format(qua
ntity_standardized.shape))
print("The Shape of the Data Matrix for the Number of Projects Proposed Previously by the Teacher
is : {}".format(prev_projects_standardized.shape))
print("\n")
print("="*100)
print("\n")
print("TITLE BOW : {}".format(title_bow.shape))
print("\n")
print("TITLE TFIDF : {}".format(title_tfidf.shape))
print("\n")
print("TITLE AVG W2V : ({}, {})".format(len(avg_w2v_vectors_titles), len(avg_w2v_vectors_titles[0]
)))
print("\n")
print("TITLE TFIDF W2V : ({}, {})".format(len(tfidf_w2v_vectors_title),
len(tfidf_w2v_vectors_title[0])))
```

```
The Shape of Data matrices for Categorical Data are :

The Shape of Data Matrix for different Categories of projects is : (109248, 9)
The Shape of Data Matrix for different Sub-categories of projects is : (109248, 30)
The Shape of Data Matrix with respect to Projects from a particular State in the United States is
: (109248, 51)
The Shape of the Data Matrix of the different projects with respect to the Grades of the students
is : (109248, 5)
The Shape of the Data Matrix with respect to title of the Teacher proposing the Teacher is :
(109248, 6)

====================================================================================================

The Shape of Data matrices for Numerical Data are :

The Shape of the Data Matrix for price of the projects is : (109248, 1)
The Shape of the Data Matrix for Quantity of the items for the projects is : (109248, 1)
The Shape of the Data Matrix for the Number of Projects Proposed Previously by the Teacher is : (1
09248, 1)

====================================================================================================

TITLE BOW : (109248, 5107)

TITLE TFIDF : (109248, 5107)

TITLE AVG W2V : (109248, 300)

TITLE TFIDF W2V : (109248, 300)
```

In [119]:

```
X = hstack((categories_one_hot, sub_categories_one_hot, school_state_categories_one_hot,
project_grade_categories_one_hot, teacher_prefix_categories_one_hot, price_standardized,
```

```
quantity_standardized, prev_projects_standardized, title_bow))
X.shape
```

Out[119]:

```
(109248, 5211)
```

In [133]:

```
from sklearn.manifold import TSNE
X = X.tocsr()
X_new = X[0:5000,:]
```

In [134]:

```
X_new = X_new.toarray()
model = TSNE(n_components=2,perplexity = 100.0,random_state=0)
tsne_data_b=model.fit_transform(X_new)
```

In [135]:

```
labels = project_data["project_is_approved"]
labels_new = labels[0: 5000]
len(labels_new)
```

Out[135]:

```
5000
```

In [136]:

```
tsne_data_b = np.vstack((tsne_data_b.T, labels_new)).T
tsne_df_b = pd.DataFrame(tsne_data_b, columns = ("1st_Dim","2nd_Dim","Labels"))
```

In [137]:

```
tsne_df_b.shape
```

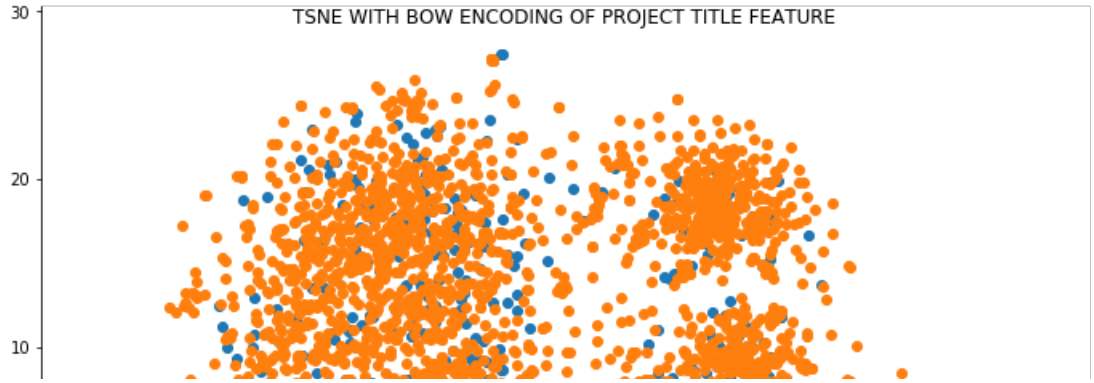
Out[137]:

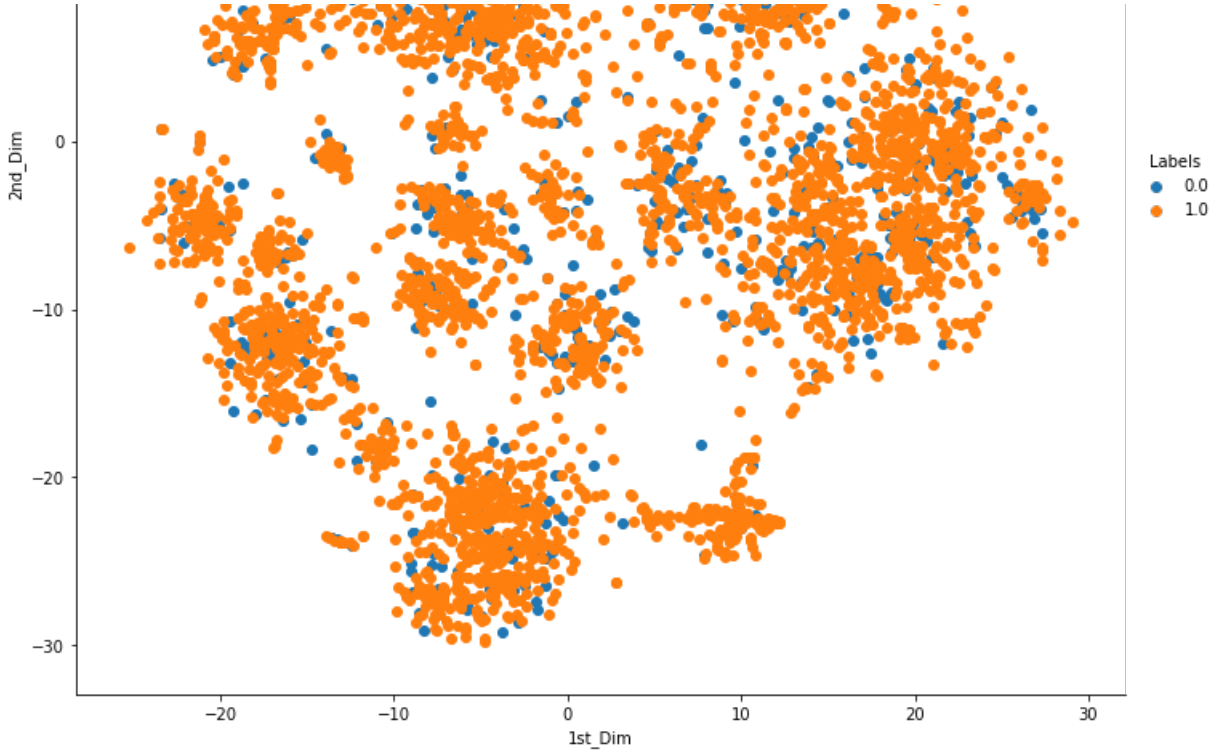
```
(5000, 3)
```

In [138]:

```
#please write all of the code with proper documentation and proper titles for each subsection
#when you plot any graph make sure you use
    # a. Title, that describes your plot, this will be very helpful to the reader
    # b. Legends if needed
    # c. X-axis label
    # d. Y-axis label

sns.FacetGrid(tsne_df_b, hue = "Labels", size = 10).map(plt.scatter, "1st_Dim", "2nd_Dim").add_lege
nd().fig.suptitle("TSNE WITH BOW ENCODING OF PROJECT TITLE FEATURE ")
plt.show()
```





summary :

1. We observe alot of overlapping in the datapoints and the points are well scattered, unable to draw any proper conclusion

2.2 TSNE with `TFIDF` encoding of `project_title` feature (5000 Data Entries)

In [139]:

```
X = hstack((categories_one_hot, sub_categories_one_hot, school_state_categories_one_hot,
project_grade_categories_one_hot, teacher_prefix_categories_one_hot, price_standardized,
quantity_standardized, prev_projects_standardized, title_tfidf))
X.shape
```

Out[139]:

```
(109248, 5211)
```

In [140]:

```
X = X.tocsr()
X_new = X[0:5000,:]
```

In [141]:

```
X_new = X_new.toarray()
model = TSNE(n_components = 2, perplexity = 100.0, random_state = 0)
tsne_data_tfidf = model.fit_transform(X_new)
```

In [142]:

```
tsne_data_tfidf = np.vstack((tsne_data_tfidf.T, labels_new)).T
tsne_df_tfidf = pd.DataFrame(tsne_data_tfidf, columns = ("1st_Dim","2nd_Dim","Labels"))
```

In [143]:

```
tsne_df_tfidf.shape
```

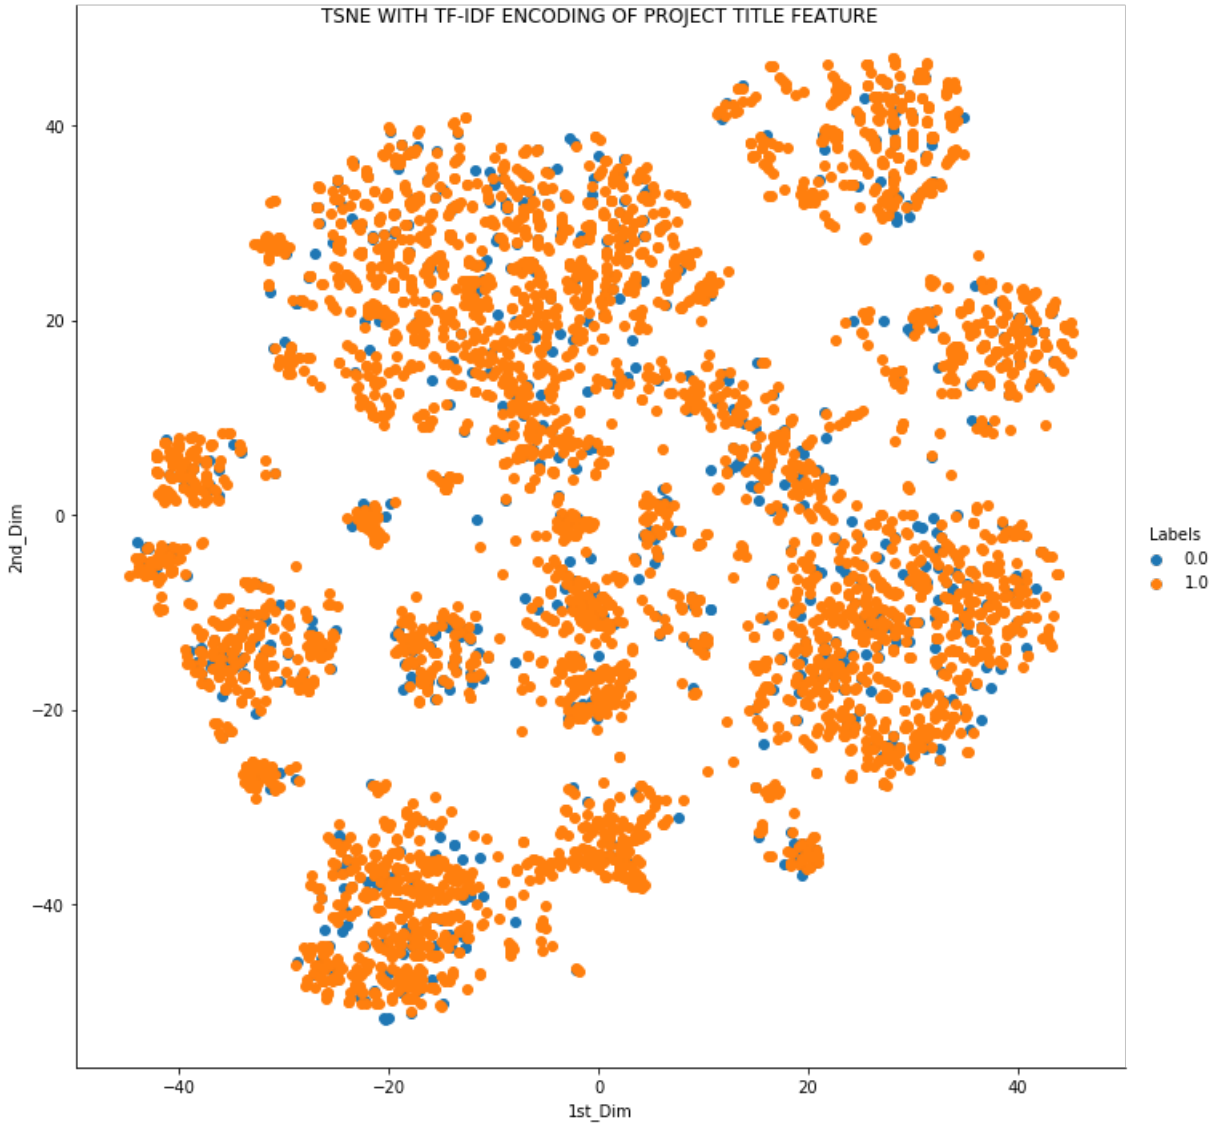
Out[143]:

```
(5000, 3)
```

In [144]:

```
# please write all the code with proper documentation, and proper titles for each subsection
# when you plot any graph make sure you use
    # a. Title, that describes your plot, this will be very helpful to the reader
    # b. Legends if needed
    # c. X-axis label
    # d. Y-axis label

sns.FacetGrid(tsne_df_tfidf, hue = "Labels", size = 10).map(plt.scatter, "1st_Dim", "2nd_Dim").add_
legend().fig.suptitle("TSNE WITH TF-IDF ENCODING OF PROJECT TITLE FEATURE ")
plt.show()
```



summary :

The Blue and the Orange points do not form any clusters or accumulation of any type, Hence drawing conclusions seems to quite impossible with the current state of the T-SNE data using TF - IDF Encoding

2.3 TSNE with `AVG W2V` encoding of `project_title` feature (5000 Data Entries)

In [145]:

In [145]:

```
X = hstack((categories_one_hot, sub_categories_one_hot, school_state_categories_one_hot,
project_grade_categories_one_hot, teacher_prefix_categories_one_hot, price_standardized,
quantity_standardized, prev_projects_standardized, avg_w2v_vectors_titles))
X.shape
```

Out[145]:

```
(109248, 404)
```

In [146]:

```
X = X.tocsr()
X_new = X[0:5000,:]
```

In [147]:

```
X_new = X_new.toarray()
model = TSNE(n_components = 2, perplexity = 100.0, random_state = 0)
tsne_data_avg_w2v = model.fit_transform(X_new)
```

In [148]:

```
tsne_data_avg_w2v = np.vstack((tsne_data_avg_w2v.T, labels_new)).T
tsne_df_avg_w2v = pd.DataFrame(tsne_data_avg_w2v, columns = ("1st_Dim","2nd_Dim","Labels"))
```

In [149]:

```
tsne_df_avg_w2v.shape
```

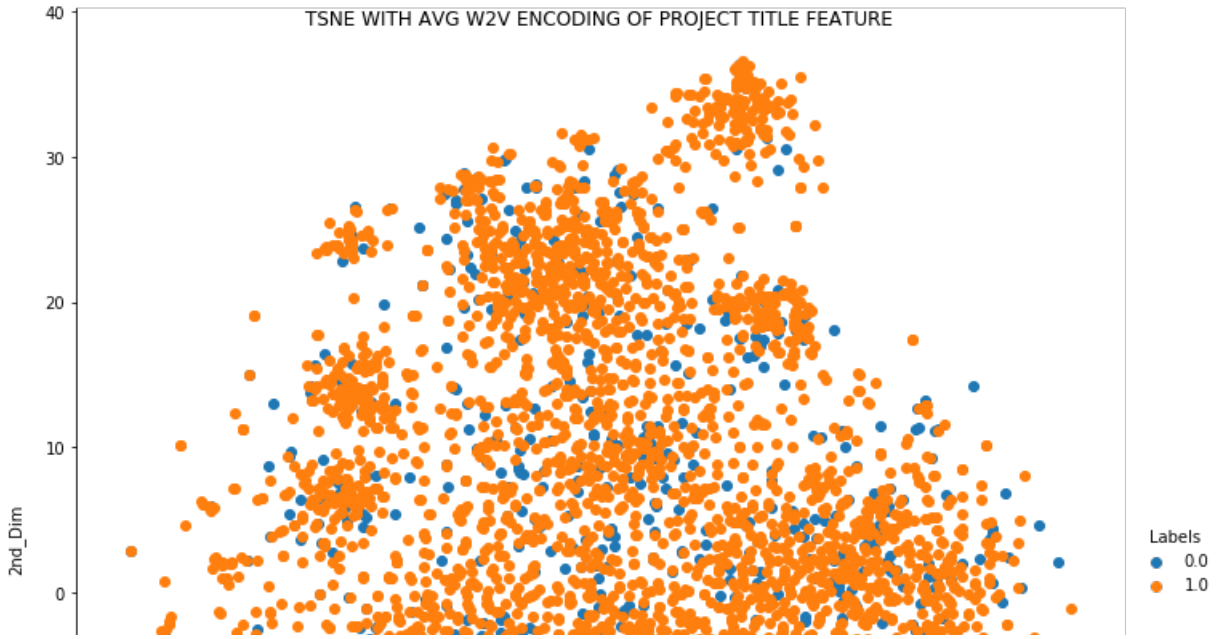
Out[149]:

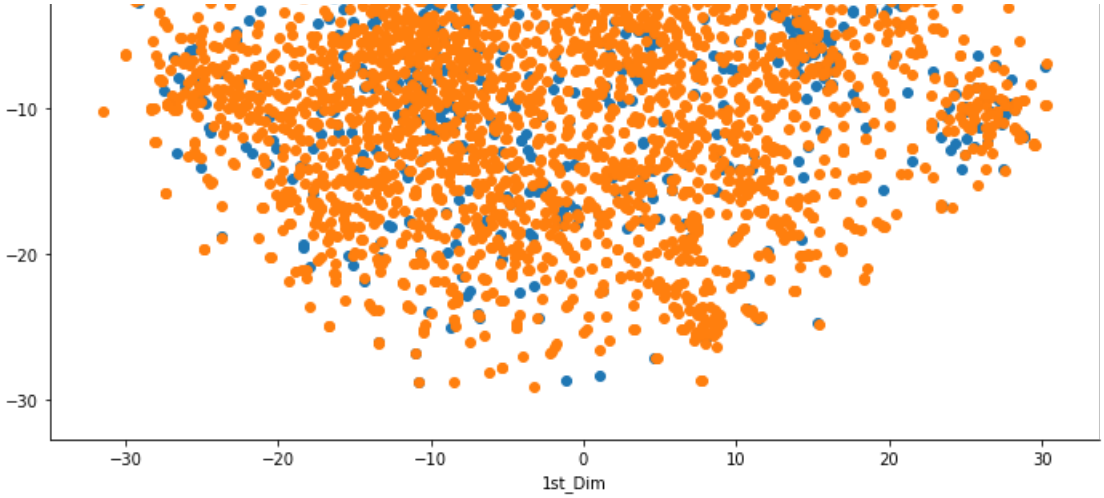
```
(5000, 3)
```

In [150]:

```
# please write all the code with proper documentation, and proper titles for each subsection
# when you plot any graph make sure you use
    # a. Title, that describes your plot, this will be very helpful to the reader
    # b. Legends if needed
    # c. X-axis label
    # d. Y-axis label

sns.FacetGrid(tsne_df_avg_w2v, hue = "Labels", size = 10).map(plt.scatter, "1st_Dim", "2nd_Dim").ad
d_legend().fig.suptitle("TSNE WITH AVG W2V ENCODING OF PROJECT TITLE FEATURE ")
plt.show()
```





summary

We do not observe any clusters for whether the Project is accepted or not accepted. Hence we are not able to achieve the desired result using Avg- Word2vec

2.4 TSNE with `TFIDF Weighted W2V` encoding of `project_title` feature (5000 Data Entries)

In [152]:

```
X = hstack((categories_one_hot, sub_categories_one_hot, school_state_categories_one_hot,
project_grade_categories_one_hot, teacher_prefix_categories_one_hot, price_standardized,
quantity_standardized, prev_projects_standardized, tfidf_w2v_vectors_title))
X.shape
```

Out[152]:

```
(109248, 404)
```

In [153]:

```
X = X.tocsr()
X_new = X[0:5000,:]
```

In [154]:

```
X_new = X_new.toarray()
model = TSNE(n_components = 2, perplexity = 100.0, random_state = 0)
tsne_data_tfidf_w2v = model.fit_transform(X_new)
```

In [155]:

```
tsne_data_tfidf_w2v = np.vstack((tsne_data_tfidf_w2v.T, labels_new)).T
tsne_df_tfidf_w2v = pd.DataFrame(tsne_data_tfidf_w2v, columns = ("1st_Dim","2nd_Dim","Labels"))
```

In [156]:

```
tsne_df_tfidf_w2v.shape
```

Out[156]:

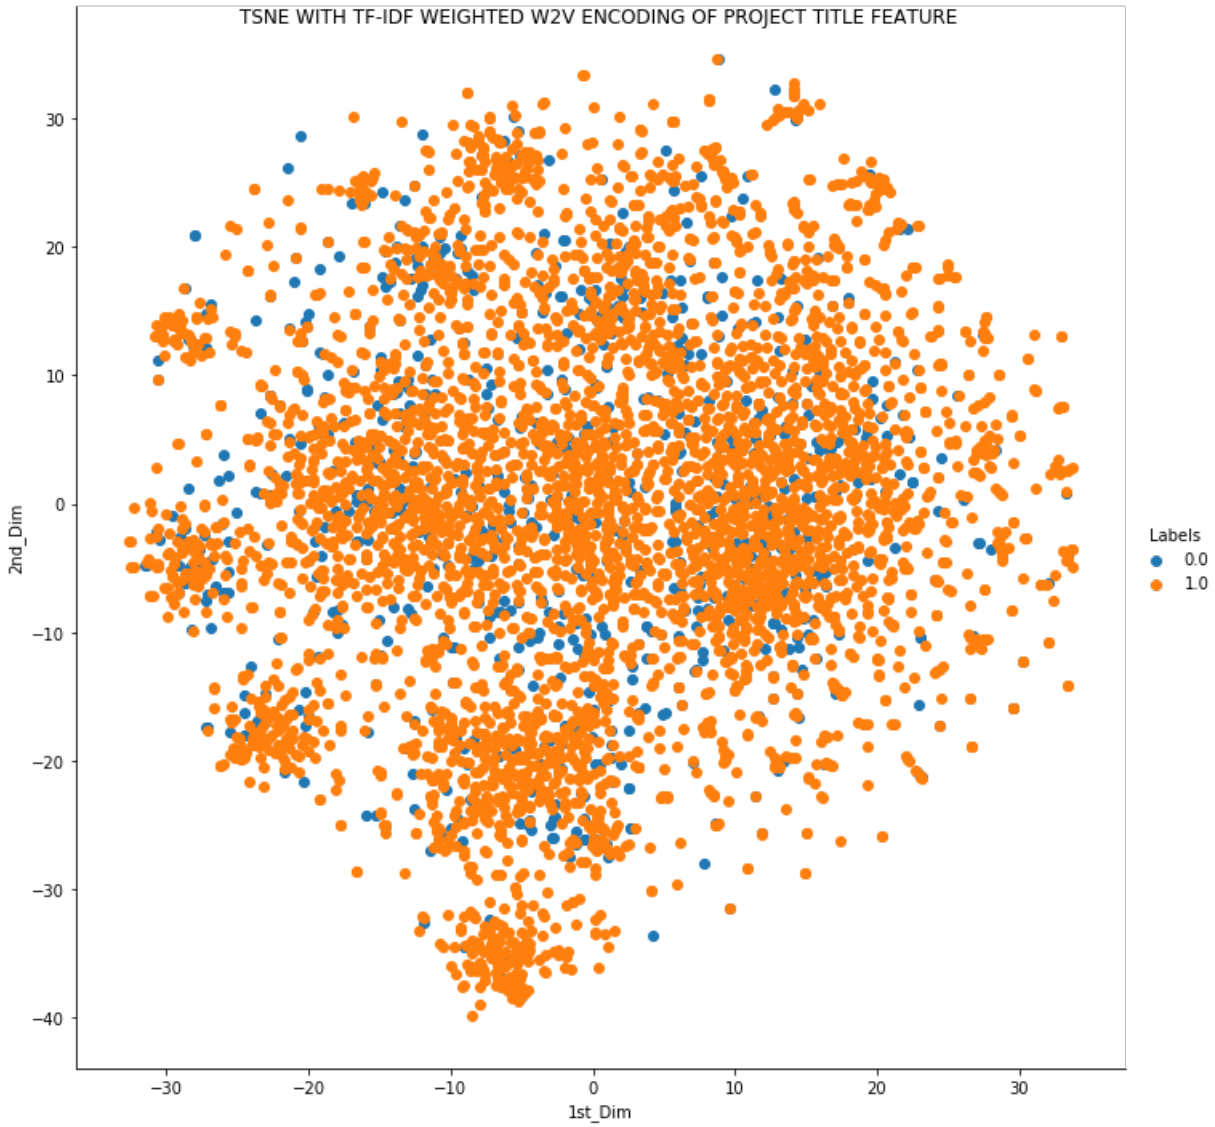
```
(5000, 3)
```

In [157]:

```
# please write all the code with proper documentation, and proper titles for each subsection
```

```
# when you plot any graph make sure you use
    # a. Title, that describes your plot, this will be very helpful to the reader
    # b. Legends if needed
    # c. X-axis label
    # d. Y-axis label

sns.FacetGrid(tsne_df_tfidf_w2v, hue = "Labels", size = 10).map(plt.scatter, "1st_Dim", "2nd_Dim").
add_legend().fig.suptitle("TSNE WITH TF-IDF WEIGHTED W2V ENCODING OF PROJECT TITLE FEATURE ")
plt.show()
```



Summary :

This visualisation of TSNE with TF-IDF Weighted Word2Vec does not seem to yield the expected result of clustering similar data points. Hence we would have to try any other method

2.5 TSNE with BOW, TFIDF, AVG W2V, TFIDF Weighted W2V encoding of project_title feature (5000 Data Entries)¶

In [158]:

```
X = hstack((categories_one_hot, sub_categories_one_hot, school_state_categories_one_hot,
project_grade_categories_one_hot, teacher_prefix_categories_one_hot, price_standardized,
quantity_standardized, prev_projects_standardized, title_bow, title_tfidf, avg_w2v_vectors_titles,
tfidf_w2v_vectors_title))
X.shape
```

Out[158]:

```
(109248, 10918)
```

In [159]:

```
X = X.tocsr()
X_new = X[0:5000,:]
```

In [160]:

```
X_new = X_new.toarray()
model = TSNE(n_components = 2, perplexity = 100.0, random_state = 0)
tsne_data_complete = model.fit_transform(X_new)
```

In [161]:

```
tsne_data_complete = np.vstack((tsne_data_complete.T, labels_new)).T
tsne_df_complete = pd.DataFrame(tsne_data_complete, columns = ("1st_Dim","2nd_Dim","Labels"))
```

In [162]:

```
tsne_df_complete.shape
```

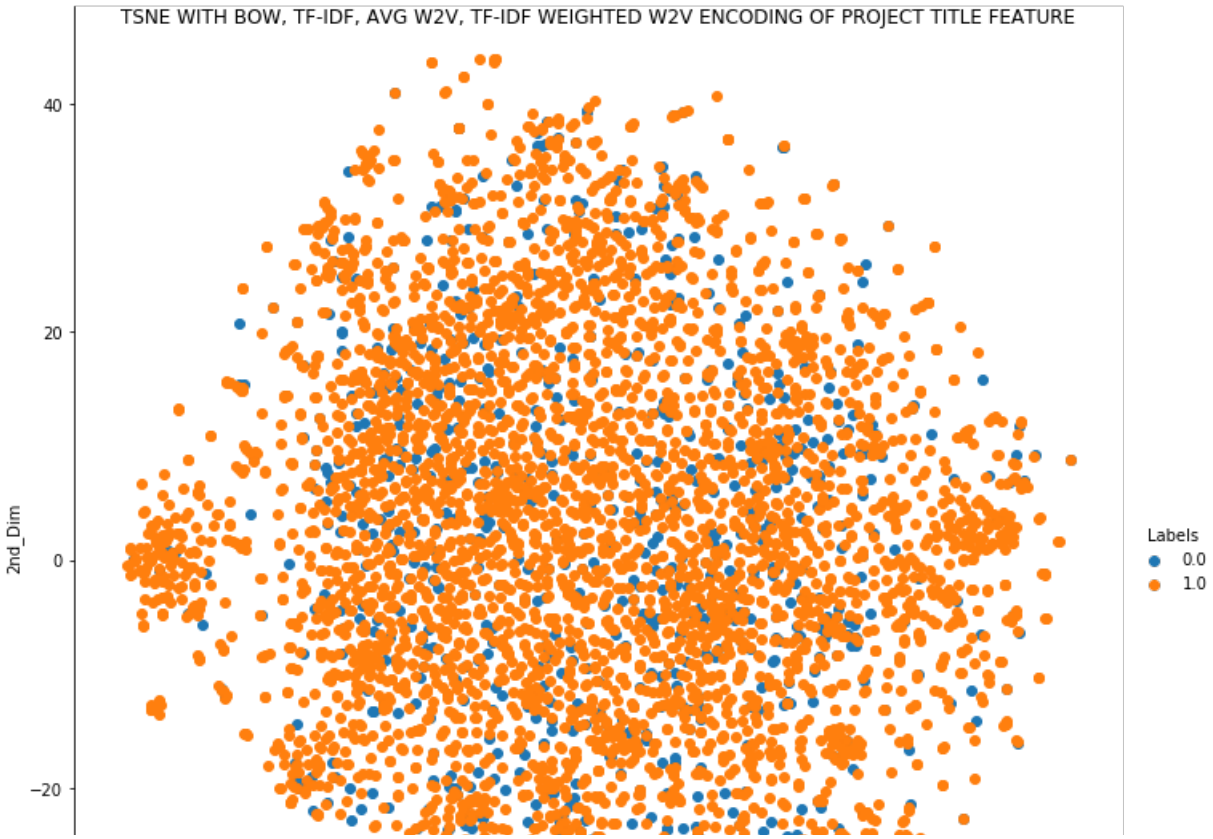
Out[162]:

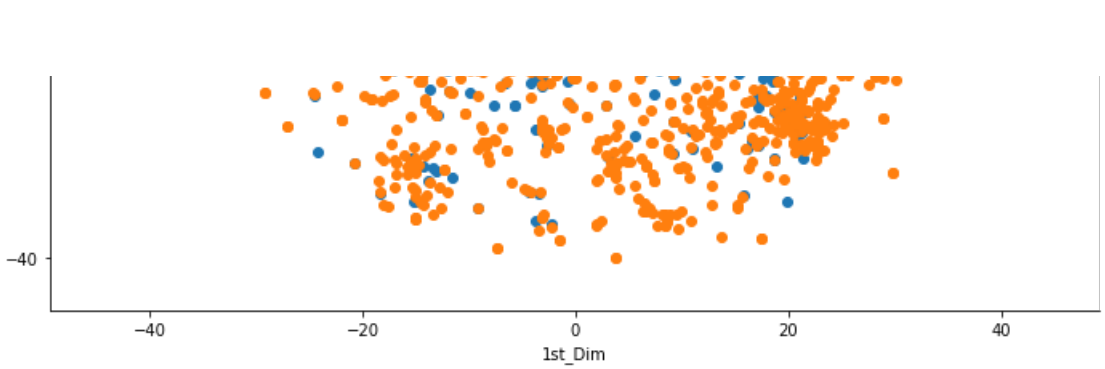
```
(5000, 3)
```

In [163]:

```
# please write all the code with proper documentation, and proper titles for each subsection
# when you plot any graph make sure you use
    # a. Title, that describes your plot, this will be very helpful to the reader
    # b. Legends if needed
    # c. X-axis label
    # d. Y-axis label

sns.FacetGrid(tsne_df_complete, hue = "Labels", size = 10).map(plt.scatter, "1st_Dim", "2nd_Dim").a
dd_legend().fig.suptitle("TSNE WITH BOW, TF-IDF, AVG W2V, TF-IDF WEIGHTED W2V ENCODING OF PROJECT
TITLE FEATURE ")
plt.show()
```





summary :

This visualisation of TSNE with Bag of Words, TF-IDF, Avg Word2Vec, TF-IDF Weighted Word2Vec does not seem to yield the expected result of clustering similar data points. Hence we would have to try any other method.

CONCLUSION

1. Delaware (DE) state from the United States has the highest percent of projects accepted within the whole country having almost 90% acceptance rate, followed by North Dakota (ND) and Washington (WA) nearly 89% and 88% respectively each.
2. Vermont (VT) has the lowest Approval rate with exactly 80% followed by District of Columbia (DC) and Texas (TX) with nearly 80% and 81% respectively.
3. Female Teachers have the maximum number of projects proposed and accepted compared to the male teachers.
4. There are alot of projects proposed for the students between Pre Kindergarden and 2nd Grade while for the rest it keeps decreasing as the Grades increase.
5. We also notice that Students between the 9th Grade and 12th Grade have the lowest number of projects proposed as well as accepted.
6. Projects belonging to the Literacy and Language categories have the highest number of projects proposed under. The maximum number of accepted projects also belong to this category, having an acceptance rate of nearly 87%.
7. Projects belonging to both Maths and Science have acceptance rate of nearly 82% while introducing the concept of Literacy and Language to this can increase its accpetance rate to nearly 87%
8. Projects belonging to both Maths and Science when combined with Applied Learning has the least number of projects proposed as well approved.¶
9. There is also Variability in Acceptance rate, projects under the category Warmth, Care and Hunger have an accpetance rate of 93.5%
10. The highest number of projects are registered under Literacy and Langauage with 52,239 projects, followed by Maths and Science having 41,421 projects.
11. The sub-Category Literacy has the highest number of projects approved with 8371 projects. Also the accpetance rate is 88%.
12. The sub-Category Health and Wellness have the lowest number of projects proposed with 3,583 projects only.
13. Roughly most of the projects have 3, 4 or 5 words in the title.There are hardly any project titles containing more than 10 words.
14. The number of words in the Project Essays of Approved Projects are slightly more than the number of words in the Project Essays of the Rejected Projects.
15. The Maximum price for any project should be less than 10,000 dollars.The approved projects tend to have lower cost when compared to the projects that have not been approved.
16. We observe that it is not mandatory for a teacher to have proposed any project prior. Maximum number of teachers, nearly 82% of the approved projects have been submitted by teachers with no prior project proposals. New talent and efforts are well appreciated.
17. Very few teachers who have proposed more than 20 projects have got approval. But the rate of approval is Higher given the teacher has proposed atleast 19 different projects.
18. The project summaries containing numeric values have a very high acceptance rate of 90%. Well, proper numbered requirements suggest clarity in the proposals and hence Alot of people tend to donate for a better cause, that is to help children.
19. We observe that on an average Each project costs nearly 298 Dollars. The Price paid is generally for the purchase of the Items. The projects on an average require atleast 17 Different of similar items.
20. Visualisation of TSNE with Bag of Words, TF-IDF, Avg Word2Vec, TF-IDF Weighted Word2Vec does not seem to yield the expected result of clustering similar data points. Hence we would have to try any other method.
